Discussion1

What are the advantages of Blink without delay?

Ans: 在發光的間隔中程式可以做其他事情。假設在沒有使用 delay 的狀況下,在燈光閃爍的途中可以繼續接收新的輸入。

Discussion 2

- Remove the "delay(50)" in the code. Play around by pushing the button several times.
- Observe the change of "buttonPushCounter". Why do we see more than one push even if there is only one button state change?

Ans: 由於在按下按鈕的過程中會產生 bounce, 會使 buttonPushCounter 的數字計算不正確,所以才要使用 delay(50)來避免這樣的狀況。
