## Discussion1

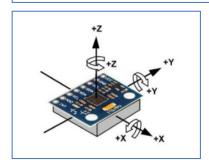

• How to find the xyz direction of accelerometer and gyroscope?

Ans: 旋轉不同角度,觀察 xyz 值得絕對值哪個最大,accelerometer 因為有重力的影響可以很明顯看出來,下面的數據是我將 MPU-6050 擺如圖片的樣子,就可以找到 accelerometer 的 Z 方向,而 gyroscope 也同理,透過旋轉得知方向。

此數值是將 MPU6050 如圖片平放後,向左旋轉後所得到的值。

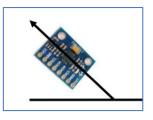

Acceleration X: 0.67, Y: 0.06, Z: 9.30 m/s^2

Rotation X: -0.28, Y: 0.52, Z: 4.18 rad/s

• When you put the gyroscope at a certain angle, what is the rotation value for (gx, gy, gz)?

Ans: 如果 gyroscope 維持在一個角度不變後, rotation value for (gx, gy, gz)就會維持在 0 附近,可以看到將 MPU6050 如圖片放置後,下圖數據所顯示的值。

Acceleration X: 8.43, Y: 4.87, Z: 2.09 m/s^2 Rotation X: -0.02, Y: -0.01, Z: 0.01 rad/s

Temperature: 26.25 degC

Acceleration X: 8.43, Y: 4.88, Z: 2.09 m/s^2 Rotation X: -0.01, Y: -0.02, Z: 0.01 rad/s

Temperature: 26.24 degC

Acceleration X: 8.41, Y: 4.87, Z: 2.11 m/s^2 Rotation X: 0.01, Y: -0.01, Z: 0.01 rad/s

Temperature: 26.24 degC

## Discussion 2

 The embedded Digital Motion Processor can report the roll/pitch/yaw. In quiz 3, we also calculate roll and pitch. Please compare the results between yours and DMP.

Ans: 在放著不動的情況下, DMP 的 roll 跟 pitch 都比我所算出的數值還小。

## DMP

ypr	-0.43	-0.36	0.26
ypr	-0.43	-0.36	0.26

## Mine

roll: 1.28 rad/s

pitch: -0.55

roll: 1.27 rad/s

pitch: -0.52
